## Facsimile Transmittal Cover Sheet

RECEIVED  
CENTRAL FAX CENTER

<b>To:</b>	<u>Examiner J. D. Crabtree</u>	<b>From:</b>	<u>Daniel A. Thomson</u>	<b>JUN 27 2007</b>
<b>Re:</b>	<u>10/695,023</u>	<b>Date:</b>	<u>June 27, 2007</u>	
<b>Fax:</b>	<u>571.273.8300</u>	<b>Total pages (Including cover sheet):</b>	<u>5</u>	

Examiner Crabtree:

Attached please find the following documents for your review:

1. Significance of the Masculine-Feminine Word Survey
2. Masculine-Feminine Word Survey
3. Masculine-Feminine Identification Survey Results

If possible, would you please take the survey (Item 2), before our teleconference on Thursday, June 28<sup>th</sup> at 12:30 p.m.

If you have any questions, please do not hesitate to contact me.

~ Daniel A. Thomson

## The Significance of the Masculine-Feminine Word Survey

The real significance of the Masculine-Feminine Word Survey is that it shows any distinction among words along a masculine-feminine continuum at all. Initially, many overtly look at the results as indicators of which word in each pair is more masculine or feminine. That is not the point of the survey. The point is to show that such a distinction *does* exist and is *not* purely random across a population. It highlights that other forces are working within us to guide our decisions that lie outside the realm of rational thought processes. What allows these forces to work is intuition. Thus, the survey's primary purpose is to give people a real-time experience with their own intuition.

In order to clarify this point, I will illustrate with a coin toss.

If I were to flip a coin and it landed "heads," you might not suspect anything unusual about the coin. However, if I flipped it ten times and ten heads appeared, you might begin to suspect that my coin is loaded. A hundred such flips and you would definitely suspect so. The same belief might occur if there were ninety, eighty or seventy heads in a hundred flips. We all know, based upon probability, that from a hundred flips, we should see about fifty heads and fifty tails or something close to that.

Moving back to the survey, we can say that one person's results are akin to the flipping of a single coin; we cannot tell if the results are "loaded." However, if after ten, fifty or a hundred results from other people we begin to see anything but something close to fifty-fifty, we can say that *something* is influencing those results. They are not random.

There are three main reasons why we can suspect something is loaded about our responses:

1. Except for Pairs #1 and #7, none of the words are feminine or masculine.
2. In an overwhelming number of the cases, we were never formally taught that one word was more masculine or feminine than the other.
3. Men and women should respond similarly.

How can a cannonball be a boy and a sail a girl? How can "23" rather than "twenty-three" be more associated with men than women? When were we taught in school that "X"

is more masculine than "A" or that quality was more feminine than quantity. Finally, how did it come to be that in some cases women and men will respond quite differently to some words and not others?

When taking this survey many people have expressed that they are doing no better than guessing. If that were truly the case, then we should see more results closer to the expected of fifty-fifty. Thus, the purpose of the survey is not to show how much one word is more masculine or feminine than the other; the purpose is to show that the answer is *not* fifty-fifty (or even close to it).

Since the survey clearly shows that the distinction between words is a loaded one, what can we conclude? First, influential forces exist within us, and we don't necessarily have to be aware of them for them to function. Second, these forces are similar in each of us. And third, they extend beyond narrow notions of masculine and feminine to include concepts that aren't strictly the domain of men or women.

How do these forces influence us? By acting upon our intuition, we are influenced through an emotional process which does not require our awareness or conscious engagement. By contrast, forces acting upon our cognition influence through a thought process that does require those things.

While this may seem far fetched, it's no different than the duality existing in today's machines and computers. Some aspects we directly control and observe on a conscious level while other aspects run in the "background" without our awareness or involvement. Diagnostic functions and protocols facilitating data feeds in different formats are examples. These unseen aspects are very important in keeping our machines running. Just as our work would become bogged down if we had to be engaged in all the decisions our machines made, our daily lives would be as well if we had to consciously process everything before we could move forward.

That means something else allows us to process experiences so we don't have to consciously process every bit of every experience. That is intuition.

*Please use the contact information above to discuss how the concepts in these capabilities might help your business.*

## Masculine – Feminine Word Survey

The purpose of this survey is to identify which word in each numbered pair you believe is more masculine or feminine. Complete as quickly as possible. Address each the best you can. Please do not leave any uncircled.

What is your gender (circle one): **Male** **Female**

Name: \_\_\_\_\_

- If you are **male**, circle the word in each pair you find more **masculine**.
- If you are **female**, circle the word in each pair you find more **feminine**.

<u>First Word</u>	<u>Second Word</u>	<u>First Word</u>	<u>Second Word</u>	<u>First Word</u>	<u>Second Word</u>
1. Man	Woman	23. Spread	Concentrate	45. Teach	Command
